F. OTHER CONTRIBUTIONS TO THE SCHOLARLY COMMUNITY

In 2018-19, I was President of the Statistical Society of Canada. Statistical Society of Canada. The Statistical Society of Canada is the primary academic organization for statisticians in Canada, and the Biostatistics section is the largest section within the SSC. I have served twice as President of the Biostatistics section of the SSC.

I served (2012-13) as President of the Society for Pediatric and Perinatal Epidemiologic Research, and continue to represent the society on the Executive Committee for the 2016 Congress of Epidemiology of the Americas. SPER is an international society and the primary academic organization for pediatric and perinatal epidemiologists worldwide.

I was graduate program director in the department of Epidemiology, Biostatistics, and Occupational Health (2015-2018), responsible for direction and oversight of all graduate programs in the department. I was biostatistics program director from 2006 to 2011, and was the leader of the major program revision that took place in 2006. We overhauled the program in total, bringing the content in line with that in top American biostatistics program.

At the Montreal Children's Hospital and McGill University Health Centre, I played a leading role in developing statistical consulting services. From 1996 to 2013 I led and developed the Biostatistics Consulting Service, and led the amalgamation of biostatistics services under the Centre for Innovative Medicine and the Centre for Outcomes Research and Epidemiology at the Research Institute of the MUHC-RI. I have also played a leadership role in Information Systems at the MUHC Research Institute. I currently chair a committee with the mandate to develop a research IS program that meets the needs of investigators while satisfying government confidentiality and security rules for hospitals.

Finally, I am active in journals and in reviewing for granting agencies. I am involved in three journals, including as Editor-in-Chief of *Statistics in Medicine* and Editor of the *American Journal of Epidemiology*, and have participated in national grant panels continuously since 2001 (CIHR, NCIC) and FRSQ panels since 2006; I recently chaired a CIHR Project Scheme panel for two years. I have received three invitations to participate in NIH study sections, two of which I declined due to time conflicts. I have been external reviewer on several tenure and promotion dossiers and Ph.D. theses (>6 in 2019).

G. RESEARCH

Research Activities

My research has developed since arrival at McGill, from my theoretical work during my Ph.D., into statistical methods for meta-analysis and causal inference, collaborative and methodologic work in perinatal and reproductive epidemiology, and most recently collaborative and methodologic work in pharmacoepidemiology. I have held peer-reviewed career scholar support continuously since 1998 for my research work, from MRC/CIHR, McGill, and FRSQ, and an endowed chair.

Past

Saddlepoint approximations in categorical data: My Ph.D thesis work assessed these approximations to exact conditional statistical distributions. This resulted in two publications in statistical journals.

Meta-analysis: I have had an active research program in meta-analysis, focused on both practical and statistical methods. This research initiated as a research assistantship during my PhD. program, which resulted in two published papers in top statistics journals. As part of a collaborative group led by David Moher, I have been involved in several research projects including two CIHR-funded grants. Finally, my work on multivariate meta-analysis with PhD student Khajak Ishak resulted in two published papers and two invited presentations (SAMSI workshop on meta-analysis, June 2008, and the Eastern North American Region of the International Biometric Society meeting, one of the largest annual meetings in biostatistics).

Present

Pharmacoepidemiology: Since 2011 I have been the leader of the Methods team for the Canadian Network for Observational Drug Effect Studies (CNODES). CNODES' mandate is to provide high-quality evidence in response to drug safety queries generated by Canadian public health stakeholders. As methods team lead, my role is to ensure high-quality methods, and to supervise a methods research program. My program of research in pharmacoepidemiologic methods centres around efficient methods for confounding control in high-dimensional administrative data. This work has also been funded by my CIHR operating grant (2012-15) and Foundation grant.

Causal inference: Inferring causation from observational data is a critical issue in epidemiology. Methods for causal inference using potential outcomes is a very active area of research among top biostatistics and epidemiology research groups in the US and Western Europe. Since my sabbatical year in 2005-06, I have been active in causal inference from the epidemiologic and statistical methods perspective. My work addresses both generic methodological issues and issues specific to perinatal

epidemiology. This has led to several papers including significant methodologic work on development of statistical methods for causal inference with Erica Moodie at McGill, and on epidemiologic issues in implementation of causal methods with collaborators across North America (M. Hernan, E.Schisterman, S. Cole). I have been invited to give several presentations on this material, including at international meetings (invited presentation at the 2008 International Biometric Society bi-annual meeting – one of the two most prestigious international meetings of biostatisticians).

Perinatal research: Since my arrival at McGill in 1996, I have had active collaborations with Michael Kramer and others in the area of perinatal research, and have developed a program of research in statistical and epidemiologic methods specific to perinatal epidemiology. Our research group, led by Michael Kramer and myself, is recognized as a leader both in substantive and methodologic research in the field. I have published several methodologic papers as first or senior author, and several more as collaborator in this field. In particular, my work developing methods for detecting and correcting errors in gestational age was used in the current Canadian fetal growth reference, and by French and US researchers in development of growth references. My work proposing a hazard-based survival model for fetal and infant mortality has been recognized as a significant methodological advance. I have been, since 2001, an integral collaborator and lead statistician on the large, international PROBIT study of breastfeeding promotion led by Michael Kramer. Finally, my current research in statistics for perinatal research centers on causal inference for randomized trials and observational data and on merging my two current areas of research. My work in the area has been funded by two CIHR grants as principal investigator and is part of the focus of my CIHR Foundation Grant.

Collaborative research: I have an extensive collaborative record, including publications in top medical journals including New England Journal of Medicine, JAMA, and BMJ, many in perinatal epidemiology and pharmacoepidemiology.
